Dear Dr **XX**

Re: Further testing to define diabetes subtype on **XX, NHS number []**

The above patient has kindly consented to participate in our observational study (EXE-T1D) of extreme early-onset type 1 diabetes (T1D diagnosed in the first year of life). We would like to confirm their diagnosis of EET1D and prove the underlying biology of their diabetes by assessing autoantibodies and C-peptide, and collecting more clinical information. We will advise their diabetes clinician of their clinical results to inform their future treatment.

Please find enclosed the study test results performed at The Royal Devon & Exeter NHS Foundation Trust (lead site) relating to the above patient, for your records.

Yours sincerely

Dr Richard Oram
Diabetes UK Harry Keen Fellow and Clinical Senior Lecturer
Diabetes and Nephrology
