NEWBIE Surveillance

Your child's information. Your choice

This hospital is taking part in a study about neonatal diabetes.

The study aims to understand how many infants are diagnosed with neonatal diabetes per year and how the condition is diagnosed, treated and managed.

The study is being led by researchers at the Royal Devon University Healthcare NHS Foundation Trust and is being carried out through a system called the British Paediatric Surveillance Unit (BPSU) run by the Royal College of Paediatrics and Child Health.

Doctors may use information from medical records to help researchers understand how neonatal diabetes is diagnosed, treated and managed.

You do not need to do anything if you are happy for your child's information to be shared.

Opting out will not affect your child's care, treatment appointments or access to NHS services.

1) **Tell the clinical team** - You can tell your child's doctor or hospital that you do not want your child's information included in the NEWBIE study.

2) **Use the National Data opt-out -** If your child has received NHS care in England, you can make, check or change a National Data Opt-Out for confidential information used for research and planning.
